

Sherlynn Property

Location: Lynn Lake belt, near airport (1,371 hectares)
The property, consisting of 22 leased claims, is located four kilometres north of the city of Lynn Lake at Beige Lake.

Sherlynn Highlights

- **The Goodenough copper deposit** was drilled by Sherritt Gordon in the 1950s. They outlined 165,000 tonnes (historic and non-43-101-compliant) of 2.63 per cent copper, 1.21 per cent zinc and 2.06 grams per tonne gold. Granges in the late 1970s upped the historic resource (also not 43-101-compliant) to 330,000 tonnes of 2.48 per cent copper, 0.62 per cent zinc, 24.88 grams per tonne silver and 1.49 grams per tonne gold. The drilling outlined the mineralization down to 325 metres vertically and it has a strike length of 500 metres at surface with an average width of two to three metres.
- **The Barbara zinc zone** is located 400 metres south of the Goodenough copper zone and is a poorly defined zone of semi-massive sulphides of pyrite, sphalerite and chalcopyrite. It has a strike length of 500 metres, with the deepest intersection down to 325 metres. Soil enzyme leach anomalies and TEM magnetic anomalies suggest an addition to the zone may extend 400 metres south of any drilling to date. Deeper drilling was recommended by Aur Resources. Some of the better historic results:
 - Intersected 0.42 per cent copper, 2.77 per cent zinc, 17.8 grams per tonne silver and 0.6 gram per tonne gold over 6.1 metres (true width);
 - Intersected 0.21 per cent copper, 2.84 per cent zinc, 4.98 grams per tonne silver and 0.20 gram per tonne gold over 4.1 metres (true width);
 - Intersected 420 grams per tonne silver and 12.69 grams per tonne gold over 0.8 metre (in a black argillite unit).
